

# Harrison Thomas

## Summary:

Staff software engineer who designs and delivers end-to-end systems across customer-facing products, backend services, cloud infrastructure, and developer tooling. Experienced leading ambiguous, high-impact initiatives, setting cross-team technical direction, and improving reliability, performance, developer velocity, and operational efficiency. Known for translating business goals into pragmatic architecture and shippable solutions while mentoring engineers and raising standards for maintainability and product quality.

## EXPERIENCE

### Clozd, Lehi, UT — *Staff Software Engineer*

August 2026 - Present

- Design and build end-to-end systems spanning user-facing product features, backend services, cloud infrastructure, and developer tooling.
- Own ambiguous, high-impact technical problems from initial framing through delivery, balancing customer needs, technical trade-offs, and business impact.
- Set cross-team technical direction across architecture, APIs, data modeling, distributed systems, and engineering standards.
- Improve platform reliability, application performance, developer velocity, and operational efficiency through scalable and maintainable solutions.
- Partner with product, design, and engineering teams to define well-scoped work and deliver high-quality customer experiences.
- Raise the engineering bar through design and code reviews, mentorship, technical leadership, and effective use of AI-assisted development.

### Verisk, Lehi, UT — *Staff Software Engineer*

April 2026 - August 2026

- Provide technical leadership across teams, driving architecture decisions, engineering standards, and long-term platform strategy.
- Partner with engineering leadership and product stakeholders to shape roadmaps, reduce delivery risk, and align technical investments with business goals.
- Lead cross-team initiatives spanning web, mobile, backend, and CI/CD systems, with a focus on scalability, reliability, and maintainability.
- Mentor senior and mid-level engineers, guiding system design, code quality, and technical decision-making across the organization.
- Identify architectural gaps and process bottlenecks early, then define pragmatic solutions that improve developer velocity and product stability.
- Serve as a principal escalation point for complex technical issues, release readiness, and high-impact production concerns.

## EDUCATION

### Utah Valley University — *Bachelor's Degree of Computer Science*

August 2015 - April 2019

Emphasis in web and mobile technologies, with additional coursework in network communications.

Completed an associate degree at age 17.

## SKILLS

### Frontend

Angular, React, React Native, Next.js

### Testing

Jest, Playwright, Selenium

### Backend

Node.js, .NET, GraphQL

### Databases

MongoDB, MySQL, PostgreSQL, DynamoDB

### Cloud & DevOps

AWS, Azure DevOps, Git, GitHub, Firebase

### Additional

Fluent Japanese speaker

## **Verisk, Lehi, UT — *Senior Full Stack Web & Mobile Developer***

November 2022 - April 2026

- Served as the team's go-to engineer and subject matter expert for Azure DevOps, CI/CD pipelines, and release automation.
- Continue to lead the implementation and delivery of the company's mobile application in React Native, establishing the foundation for future mobile development.
- Drove architecture discussions and technical implementation for key features and new systems across web and mobile platforms.
- Helped set engineering direction by improving development workflows, build reliability, and long-term maintainability.

## **Verisk, Lehi, UT — *Full Stack Web & Mobile Developer II***

January 2022 - November 2022

- Led the initiative to rewrite the mobile application in React Native, improving performance, maintainability, and the overall user experience.
- Played a key role in shaping the mobile app's architecture, technical direction, and implementation strategy.
- Worked across frontend and backend systems to deliver new functionality and support a more scalable mobile platform.

## **Verisk, Lehi, UT — *Full Stack Web & Mobile Developer***

August 2018 - January 2022

- Built web and mobile features using Angular and NativeScript, supporting a shared product experience across platforms.
- Developed backend functionality using AWS services including CloudFormation, AppSync, DynamoDB, and S3.
- Contributed to the development of XactRemodel Go, a web and mobile productivity platform for home remodeling contractors.
- Helped deliver full-stack features from UI through cloud infrastructure, with an emphasis on reliability and usability.

## **Navitaire, SLC, UT— *Full Stack Web Developer***

December 2016 - October 2017

- Developed frontend features in Angular and integrated them with backend services built in .NET and Node.js.
- Contributed across the stack to deliver new functionality, improve application behavior, and support production systems.
- Collaborated with engineers across frontend and backend disciplines to build and maintain customer-facing web applications.

## **Oracle, Lehi, UT— *Technical Support, Japanese Speaking***

January 2016 - November 2016

- Provided bilingual technical support (English and Japanese) for Oracle MICROS cash-register software in hotels and restaurants.
